## UNIQUE DESIGN!

### RUBBER COW BLOCKS

[bovibond.com](http://bovibond.com)

positioning points for optimum glue distribution between the block and the claw

ease of movement through cushioning and flexibility of the block when walking

ergonomically shaped to the bovine claw

4 integrated anchoring points for gluing

firm outer edge for wear resistance of the block

durable rubber composite

## IMPROVED BONDING, TRACTION AND COMFORT

**RUBBER COW BLOCKS** These innovative claw blocks set a new standard in the market thanks to their unique claw shape and design. The blocks are designed with four embedded anchoring points so that the gluing of the block to the claw becomes a mechanical bond. In addition, the positioning points on the block allow for proper glue distribution between the claw and the block. The Bovi-Bond Rubber Claw Block is made of 100% rubber composite, making it soft and flexible. The cow thus experiences optimum comfort in movement. The profile on the blocks provides very good grip for the cow on wet and slippery surfaces. The solid outer edge enhances the block's wear resistance. Due to its design and material, the block is slightly lighter than the traditional rubber block.

**Size S • 12cm • 4 3/4"**
