

Easy Milk Mixer

Instructions

- Fill the vessel with half of the required water
- Turn on the engine
- Add milk powder
- Top up residual water
- When properly mixed (maximum 5 minutes), turn off the mixer. *
- Rinse with warm water after every feeding.
- Clean once a week with an alkaline agent
- For the edges use a brush for good cleaning.
- Store the mixer without a lid during the day. Then the barrel dries.

Safety instructions

- Only use 220 volt connection
- Do not put your hand in the mixer when the motor is running
- Power off before moving the mixer.

Warning

- Do not start the mixer without water in the barrel
- Do not turn on the mixer for more than 5 minutes *.
- The motor is in the blue part. There is one between the engine and the block in the barrel
- extra receptacle. There is a hose attached to this receptacle that has the blue underneath part stitched. If liquid comes out of this tube (milk or water) then there is one seal leak. It must be replaced.

Important

- Mixing for too long can destroy milk
- Running the engine for too long can lead to overheating. Plastic can then melt. Once this is done, the warranty becomes void .
