OPTIMAL CARE

Complementary Feed

MS TERRAFEED

FE

MS TerraFeed FE stimulates the gastrointestinal system and provides an easily digestible source of iron.

- Tasty
- Stimulates natural behavior (rooting)
- Rich in fermentable fiber
- Natural source of humic acids
- Highly digestible source of iron

Stimulate digestion and intestinal health

MS TerraFeed FE, A complementary feed that simulates natural behavior in pigs

Under natural conditions, pigs ingest soil to obtain iron and fibre. Based on this natural behaviour, the **MS TerraFeed Fe** was developed as a complementary feed. This palatable feed supplement provides suckling piglets with easily fermentable fibres, humic acids and highly digestible iron chelates, which support the immune system, improves micro-nutrient uptake, reduces the pH in the intestinal tract and can prevent diarrhoea.

Feeding **MS TerraFeed Fe** has also beneficial effects on intestinal microflora composition. This results in stimulated growth and improves the overall health status of piglets.

Iron

Iron is an essential component of haemoglobin, the protein in red blood cells that carries oxygen from the lungs to tissues throughout the body. Neonatal piglets require iron to produce sufficient levels of haemoglobin to support their rapid growth and development.

Fibres

Easily fermentable fibres to improve micro-nutrient uptake.

Humic acids

Reduces the pH in the intestinal tract.
