

Total Water Care

Di-O-Clean

Guaranteed clean drinking water

People often underestimate the importance of drinking water quality, even though water is the most important nutrient for animals.

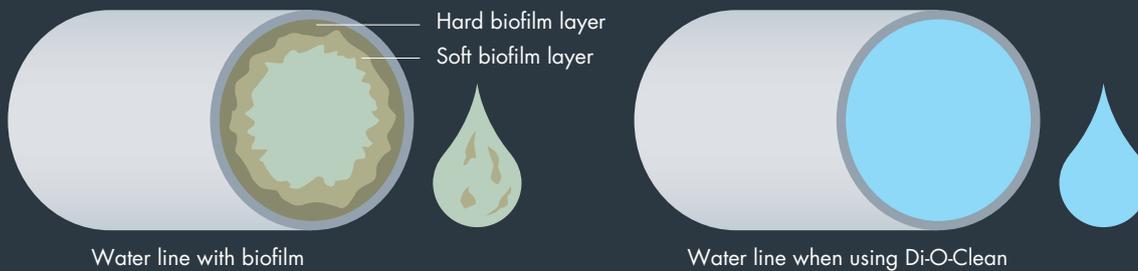

After all, animals actually take up more water per day than feed.

Contaminated drinking water leads to:

- **Less water uptake**
 - Lower feed uptake
 - Reduced general resistance
 - Lower production
- **Reduces the effectiveness of vaccinations, medication and other supplements**

Water line cleaning is essential, to avoid biofilm formation

Di-O-Clean cleans and decontaminates drinking water systems on livestock farms. It is very easy to use, and it turns water into a safe and valuable nutrient.

Completely removes biofilm layers in pipework

Kills pathogens quickly and efficiently

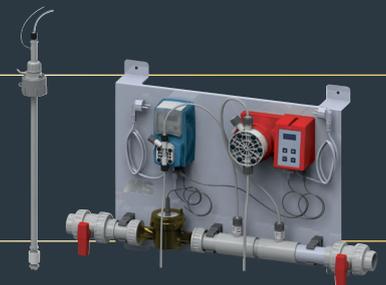

Has no aroma or flavour

MS Digidoser

Purchase certain quantities of Di-O-Clean and Goldmix pH and you can use our dosage pumps for free! Schippers has many different types and kinds available to suite your needs. We will help you set up the best system for your animals.

Perfect for use with the:

Digi Doser Duo 5: with this dosage system, Di-O-Clean and MS Goldmix pH (acidic) can be dispensed both simultaneously and independently of each other.

Full Service Concept

- Examination of the water supply
- Periodic inspection and evaluation
- Technology and products

Call now for a free drinking water inspection.

MS Goldmix pH

Good intestinal health improves overall health. Organic acids are safe for animals and will kill and prevent bacteria, mold and yeast growth in water lines.

MS Goldmix pH is essential for effective control of bacteria:

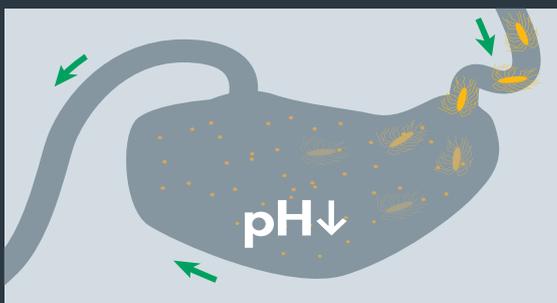

- MS Goldmix pH is essential for the effective treatment against bacteria such as Salmonella and E. coli.
- Bacteria growth is greatly reduced at pH levels under 4
- A combination of organic acids effectively kills bacteria such as Salmonella and E. coli.
- Optimizes digestion
- Reduces Bacterial pressure in the digestive system
- Improves taste of water for better intake

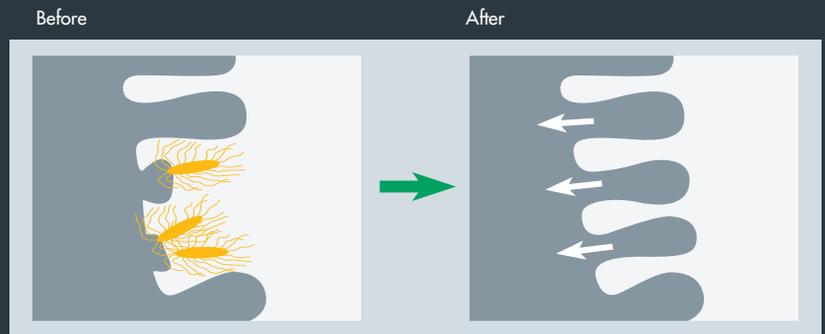

Optimizes digestion

Reduces bacterial pressure in the digestive system

Increases general resistance

Stomach

Intestine

Components of MS Goldmix pH

Sorbic Acid	Lactic Acid	Formic Acid
Enhances taste of water and buffers with Sodium Propionat to maintain a steady pH	Essential to penetrate bacterial membranes to kill bacteria internally	Improves breakdown of nutrients to improve absorption intake in digestive system
