

MS Support

For an optimal transition period

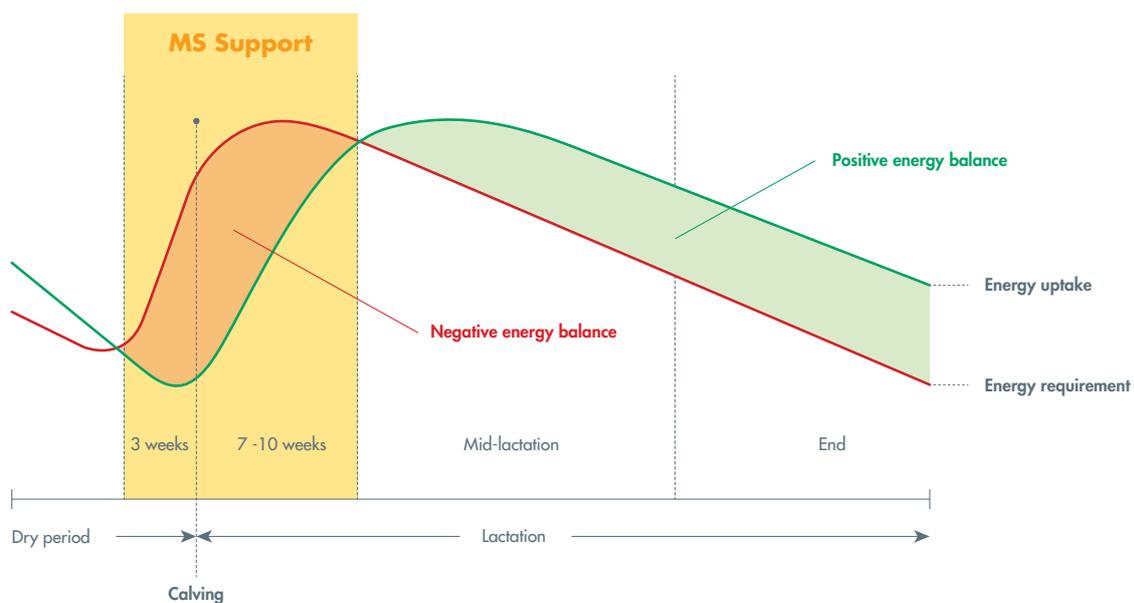

MS Schippers

Passion for Farming

The impact of ketosis shows at calving, and can last through the end of the lactation period.

It is important to provide cows with a feed supplement that will support them with the energy content they need during the calving period.

Ketosis can lead to reduced protein content and lower milk production between 350 and 500 litres per lactation.

In addition, it increases the risk of other health problems, such as:

- Displaced abomasum;
- Retained placenta;
- Mastitis; and
- Reduced fertility, resulting in longer calving intervals.

A poor start to lactation often leads to required culling later in the lactation cycle.

MS Support

MS Support is a tasty cow support feed supplement with a unique composition, providing them with the energy they need and ensuring an optimum transition period.

Provides an energy boost

Glycerine

Stimulates the rumen

Cobalt
Niacin
Essential oils

Stimulates the liver

Niacin
Biotin
Choline chloride

- Administer in feed (through the mixer wagon or directly on roughage) from 3 weeks before calving until 7-10 weeks after calving ends.
- Dosage: 175 ml/animal per day
- After the calving period has ended, individual administration is ideal (manually or by using a dosing system).

You will receive the best results from MS Support with individual dosing.

Dairy farmers share **their experiences**

Henz Peetoom, Peetom Dairy Ltd.

Northern Alberta

I'm really happy with the MS Support because before I used it I had a lot of ketosis with the cows. I use it until fifty days after calving. Since I started using it, I have fewer issues with the cows. They are getting to start up sooner and I have no major ketosis problems any more. Before this product, I used another supplement but the cows didn't want to eat it - it was hard to give. The MS Support on the other hand is really easy to feed. I let it feed by my robot and the cows eat it very well. I definitely recommend this product to other farmers.

Kees de Wildt, de Wildt Dairy Ltd.

Northern Alberta

I started use the MS Support directly after calving. Normally I use it for one week and once a day. The cows getting an energy boost by the MS Support and you definitely see the energy level of the cows getting better. Before I used the MS Support, I used propylene glycol. The MS Support is way better than propylene glycol, it's less bad for the oesophagus. It's also a lot more expensive than the MS Support, and with this product I get the same results or better. It really met my expectations and I definitely recommend the MS Support to other farmers.
