

MS UdderCare Magenta

Mastitis prevention begins with a healthy udder

MS Schippers

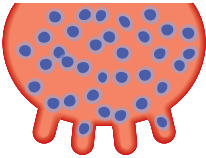

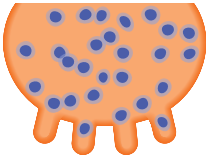

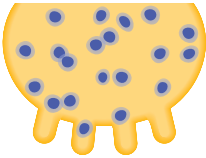

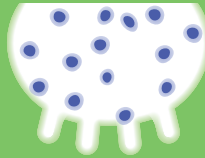

Passion for Farming

Udder health is one of the main reasons for forced dairy cattle culling, which results in high costs. An important indicator of udder health is the somatic cell count (SCC – the number of white blood cells per ml of milk).

Ensuring excellent udder health is of paramount importance to production.

A high somatic cell count results in loss of milk and reduced resistance. A high cell count is also one of the symptoms of mastitis.

As a general guide:

Mastitis	Suspected mastitis	Suspect udder	Healthy udder
			
SCC > 400.000	SCC > 250.000	SCC > 100.000	SCC < 100.000

Causes of mastitis can stem from the cow itself or her environment. It is important to take on both sources.

Hygiene is crucial for optimum udder health. Three factors play an important role here:

1. **Optimum housing hygiene**, using MS DryCare and MS Kiemkill
2. **Good preparation**, using MS Cow Udder PRE and MS Lavettes
3. **Good aftercare**, using MS Udder Care Magenta

MS UdderCare Magenta

MS UdderCare Magenta is a chlorhexidine based udder care product, for teat cleaning (foam), only to be used as after care. MS UdderCare Magenta ensures an outstanding level of care, moisture regulation and teat condition through deep penetration into skin pores.

**An effective
way to
combat
bacteria**

**Direct
teat
protection**

**An
outstanding
level of care**

MS udder care can be used on dairy cows for after care only.

A few points for attention:

- Use a clean foam/dipping-beaker or spraying unit
- Make sure the teats are fully coated
- Make sure that the cows do not lie down immediately after milking
- Do not put any of the liquid back into the original packing
